                                                                                                                                                                                                                                                                                                                           The invention relates to a preparation comprising an isolated Bipolar Affected Disorder (BAD)-Associated Protein Isoform (DPIs). The DPI's are used to screen, diagnose or prognose of BAD or unipolar depression, identify a subject at risk of developing BAD or unipolar depression, identify a subject at risk of developing BAD or unipolar depression, or monitor the effect of therapy in a subject. They are also used to screen for or identify agents that interact with a DPI. These agents, antibodies against the DPIs, and nucleic acids encoding the DPIs are used to treat or a retention deficient disorder, a schizoaffective disorder, a bipolar or a unipolar affective disorder. The DPIs are used in proteomics. The proteomic approach of using DPIs for screening, diagnosis or prognosis of system (CNS) tissue from a living patient under normal circumstances. The present sequence is a DIP decreased in the CSF (cerebro-spinal fluid) of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                           Preparation for diagnosing or treating bipolar affected disorder (BAD) unipolar depression, or for screening for modulators, comprises a BAD-associated protein isoform.

The invention relates to methods and compositions for screening, diagnosis and prognosis of Schizophrenia. The method involves detecting the presence of Schizophrenia. The method involves detecting the presence of Schizophrenia (SCH) Associated Features (SFs) and SCH Associated Protein Isoforms (SPIs) in samples, e.g. by electrophoresis, immunoassay or hybridisation assay, for diagnosing and monitoring SCH, immunoassay or hybridisation assay, for diagnosing and monitoring SCH, contemporate active abundance of at least 1 chosen feature correlates with the presence or absence of SCH, and (1) screening or diagnosis of SCH and the relative abundance of SCH, and (2) monitoring the effect of therapy administered to a subject with SCH and the relative abundance of at least 1 chosen feature which correlates with the severity of SCH. The expression and activity of the SFs, SPIs and related molecules (e.g. of the disorder and the effectiveness of treatment and as targets to identify and produce potential therapeutic agents for the treatment of sch in many cases. Consequently the identification and characterisation of cellular and/or molecular causative defects and neuropathies are necessary for improved treatment of neuropsychiatric disorders. AAUISII4-AAUIS762 represent the maino acid sequences of schizophrenia-associated corrections in the mathod of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                   Diagnosing and monitoring Schizophrenia by detecting the presence of Schizophrenia Associated Features and Schizophrenia Associated Protein Isoforms in samples of cerebrospinal fluid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; neuroprotective; nootropic; gene therapy; vaccine; Alzheimer's disease; Alzheimer's Disease-Associated Feature; AF; Alzheimer's Disease-Associated Protein Isoform; API; tryptic digest; Expression Reference Protein Isoform; ERPI; proteolysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Similarity 42.9%; Score 20; DB 4; Length 7; Similarity 42.9%; Pred. New schizophrenia associated protein isoforms and encoding nucleic acid molecules, useful for treatment, diagnosis and prognosis of schizophrenia and screening for potential drugs for treatment and new drug targets.
                                                                                                                                                                                                                                                                                                                                  Schizophrenia-associated protein isoform; SPI; SPI-206; SPI-238; SPI-240; neuroleptic; gene therapy; cerebrospinal fluid; serum; plasma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence represents a schizophrenia-associated protein isoform (SPI). These protein isoforms, e.g. SPI-206, SPI-238 and SPI-240 are detectable in cerebrospinal fluid, serum or plasma and are useful markers of schizophrenia. The sequences can be used for treatment and diagnosis of schizophrenia, screening, prognosis, monitoring the results of therapy, identifying patients most likely to respond to a particular therapy and identification of new targets for drug treatment. SPI DNA is useful as a nucleic acid probe to detect the presence of nucleic acids or SPIs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, Bipolar Affective Disorder, BAD, Depression-Associated feature, DF, Depression-Associated protein isoform, DFI, Cerebro-spinal fluid,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to the identification of depression associated protein isoforms (DPIs), particularly the tryptic digest peptides of these proteins. Some of the DPIs (AAU28404-AAU28625) described are decreased in the cerebrospinal fluid (CSF) of BAD (bipolar affective disorder) subjects, whilst other DPIs (AAU28626-AAU2887) are increased in BAD subjects. Also described are peptide sequences identified from DPI-45 and DPI-213 and the nucleic acid sequence they are encoded by. The sequences of the invention are useful for clinical screening, diagnosis, prognosis, therapy and prophylaxis of neuropsychiatric disorders e.g. BAD (also known as bipolar mood disorder, BP), maniac-depressive illnesses, attention deficit disorders, schizoaffective disorders, and unipolar affective disorders. The present sequence represents one of the DPI tryptic digest peptides of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel nucleic acid encoding a protein associated with bipolar affective disorder, which is used for diagnosis, prophylaxis and therapy of neuropsychiatric disorders, such as bipolar affective disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, depression associated protein isoform; tryptic digest peptide; DPI; cerebrospinal fluid, CSF; BAD; bipolar affective disorder; neuropsychiatric disorder; bipolar mood disorder; neuroleptic;

comprises analyzing body fluid by 2-dimensional electrophoresis for
features correlated with VD.
```

Claim 6; Page 31; 151pp; English.

The invention relates to screening, diagnosis or prognosis of Vascular Dementia (VD) in a subject comprising analysing body fluid from the subject by 2-dimensional (2-D) electrophoresis to generate a 2-D array of features containing at least one chosen feature whose relative abundance correlates with the presence, absence, stage or severity of VD or predicts the onset or course of VD, especially detecting in a sample of cerebrospinal fluid (CSF) from the subject one of 223 VD-associated protein isoforms (VPIS) (ABB55801-ABB56295) as fully defined in the specification. Detecting VD-associated features and VPI is useful for the screening, diagnosis or prognosis of VD, for determining the stage or severity of VD, for identifying a subject at risk of VD or for monitoring the effect of therapy administered to a subject having VD. Nucleic acids encoding a VPI or inhibiting the function of a VPI are useful for the treatment of VD and for gene therapy

for nsetul Screening, diagnosis or prognosis of vascular dementia (VD), useful determining stage of VD and monitoring the effect of VD therapy, comprises analyzing body fluid by 2-dimensional electrophoresis for features correlated with VD.

Claim 6; Page 33; 151pp; English.

The invention relates to screening, diagnosis or prognosis of Vascular Dementia (VD) in a subject comprising analysing body fluid from the subject by 2-dimensional (2-D) electrophoresis to generate a 2-D array of features containing at least one chosen feature whose relative abundance correlates with the presence, absence, stage or severity of VD or predicts the onset or course of VD, especially detecting in a sample of erebrospinal fluid (CSF) from the subject one of 223 VD-associated protein isoforms (VPIS) from the subject one of 223 VD-associated protein isoforms (VPIS) ABB55801-ABB56295) as fully defined in the specification. Detecting VD-associated features and VPI is useful for the screening, diagnosis or prognosis of VD, for determining the stage or severity of VD, for identifying a subject at risk of VD or for monitoring the effect of therapy administered to a subject having VD. Nucleic acids encoding a VPI or inhibiting the function of a VPI are useful for the

Wright SD;

```
Peptides AAR81847-54 are tryptic peptide fragments from human afamin (AAR81845) novel member of the human serum protein family. The fragments were used to design primers and probes (AAT00786-98) for the cloning of the afamin gene (AAT00785) from human liver cDNA. Afamin is thought to have similar properties to human albumin, alpha-foetoprotein and vitamin D binding protein due to homology with these proteins. The gene encodes a mature protein of 66576 daltons without post-translational processing (ca. 87000 daltons with post-translational processing). The protein was isolated from human plasma by a conventional chromatographic methods. The protein can be used to ameliorate ischaemia-reperfusion injury, rheumatoid arthritis, ARDS, cardiopulmonary bypass, sepsis, toxic plasma substances released after inflammation, etc
                                                                                                                                                                    Human afamin or a variant and poly:nucleotide(s) encoding it - a human serum protein with activities in common with other members of this family,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, rheumatoid arthritis, RA, diagnosis, RPI, RADF, detection, rheumatoid arthritis diagnostic feature, BRPI, synovial fluid, rheumatoid arthritis diagnostic protein isoform, screening, expression reference protein isoform, prognosis.

A method has been developed for the diagnosis of human rheumatoid arthritis (RA) using two-dimensional electrophoresis to generate a two-dimensional array of features. The method can be used for screening, diagnosis and prognosis of RA in a subject or for monitoring the effect of an anti-RA drug or therapy administered to a subject. The method comprises: (a) analysing a sample of serum or plasma and optionally comprises: (a) analysing a sample of serum or plasma and optionally comprises: (a) analysing a sample of serum or plasma and optionally comparises in the electrophoresis, to generate a two-dimensional array of features; (b) identifying at least one chosen comparing the abundance of each chosen feature whose relative abundance of that chosen feature in serum or plasma from one or more persons without RA, where the relative abundance of the chosen feature or features in the sample indicates the presence or absence of RA in the subject. The method can also be used in clinical studies for testing drugs for therapy of RA, for purification of RA-diagnostic feature (RADF) proteins can be used to identify compounds that promote or inhibit their activity, which are then used as CC RPIS. The RA-diagnostic feature (RADF) proteins can be used to identify compounds that promote or inhibit their activity, which are then used as protocols. AAY41844 to AAY41800 represent RPI peptides, AAY42101 to AAX425066 to AAX25066 to AAX25066 to AAX25066 to AAX25068 represent degenerate probes for RPIS, which are all the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Screening, diagnosis or prognosis of vascular dementia (VD), useful for determining stage of VD and monitoring the effect of VD therapy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Vascular Dementia; VD; VD-associated protein isoform; VPI; screening;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .;

A method has been developed for the diagnosis of human rheumatoid arthritis (RA) using two-dimensional electrophoresis to generate a two-dimensional array of features. The method can be used for screening, diagnosis and prognosis of RA in a subject or for monitoring the effect of an anti-RA drug or therapy administered to a subject. The method comprises: (a) analysing a sample of serum or plasma and optionally symbolic synovial fluid by two-dimensional electrophoresis, to generate a two-dimensional array of features; (b) identifying at least one chosen comparing the abundance of each chosen feature whose relative abundance of that chosen feature in the configuration of that chosen feature in serum or plasma from one or more persons without RA, where the relative abundance of the chosen feature or features in the sample indicates the presence of the subject. The method can also be used in clinical studies for testing drugs for therapy of RA, for purification of RA-chagnostic feature (RADF) proteins can be used to identify compounds that promote or inhibit their activity, which are then used as protocols. Any41844 to Any42100 represent expression reference protein isoform poptides and AAZ55066 to AAZ25068 represent degenerate probes for RPIS, which are all used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, afamin, serum protein family, albumin, alpha-foetoprotein, plasma, vitamin D binding protein, homology, post-translational processing, chromatography, Primer, PCR, amplification; probe, rheumatoid arthritis, ischaemia-reperfusion injury, ARDS, cardiopulmonary bypass, sepsis, toxic plasma substance, inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Gaps

These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention
or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold may be bound to a protein which binds to a tumour antigen. This will target the complex to tumour cells. Another surface may be bound to a cytotoxic molecule or an autoimmune antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, CTLA-4; scaffold protein; antigen-binding; receptor-binding; SCA domain; cancer; thrombosis; osteoporosis, rheumatoid arthritis; diabetic retinopathy; atherosclerosis.

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta strands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands of form two beta sheets S1/S4/S3 and S6/S5/S2 with each strand connected to the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with the structure the scaffold is constructed of two beta sheets, with the structure of the scaffold is constructed of two beta sheets, with the structure of the scaffold other via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to target the complex to tumour cells. Therefore the scaffold protein may be bound to a protein which binds to a tumour antigen. This will target the complex to tumour cells. Another surface may be bound to a protein which binds to a tumour antigen. This will target the complex to specific cells. It may also be used to change to changues for specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in constant to stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New scaffold protein, useful for stabilizing antigens used as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Desmet J,

New scaffold protein, useful for stabilizing antigens used as vaccines. Disclosure; Page 6; 105pp; English. WPI; 1999-542958/46.

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta strands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands C form two beta sheets S1/S4/S3 and S6/S5/S2 with each strand connected to the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with the structures S1/S4/S3 and S6/S5/S2/A2/A3. The beta strands are connected to each other via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold is used to stabilize antigens

A Duve H., Johnsen A.H., Maestro J.-L., Scott A.G., Jaros P.P.,

Thorpe A.;

"Isolation and identification of multiple neuropeptides of the allatostatin superfamily in the shore crab Carcinus maenas.";

Eur. J. Biochem. 250:727-734(1997).

L. -!- FUNCTION: May act as a neurotransmitter or neuromodulator.

-!- SIMILARITY: Belongs to the allatostatin family.

Mouropeptide; Amidation; Multigene family.

 allatostatin superfamily in the shore crab Carcinus maenas.";
Eur. J. Biochem. 250:727-734(1997).
-!- FUNCTION: May act as a neurotransmitter or neuromodulator.
-!- SIMILARITY: Belongs to the allatostatin family.
Neuropeptide; Amidation; Multigene family.
MOD RES 5 AMIDATION (POTENTIAL).
SEQÜENCE 5 AA; 586 MW; 672879D5AB300000 CRC64;

-!- FUNCTION: Mediates tetrahydrobiopterin inhibition of GTP
-cyclohydrolase I. This inhibition is reversed by L-phenylalanine
(By similarity).
-!- SUBUNIT: Homodimer (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

"Peptides from the skin glands of the Australian buzzing tree frog Litori electrica. Comparison with the skin peptides from Litoria rubella.",
Aust. J. Chem. 52:639-645(1999).
-!- FUNCTION: Shows neither neuropeptide activity nor antibiotic activity.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the skin dorsal glands.
Amphibian defense peptide.

                                                                                                                                                                                                                                             Patent No. 6420120.

GENERAL INFORMATION:
APPLICANT: Boulanger, Pierre
APPLICANT: Hong, Saw See
APPLICANT: Hong, Saw See
APPLICANT: Hong, Saw See
TITLE OF INVENTION: Use of a Polypeptide as Cell Receptor for Adenoviruses
TITLE OF INVENTION: USe 0.32751-036
CURRENT APPLICATION NUMBER: US/09/155,613A
CURRENT APPLICATION NUMBER: PCT/FR98/00184
PRIOR FILING DATE: 1998-01-30
PRIOR FILING DATE: 1997-01-30
PRIOR PRIOR FILING DATE: 1997-01-30
PRIOR FILING DATE: 1997-01-30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ..

                                                                                                                                                                                                             This peptide comprises an epitope tag that can be used in methods of the invention. The invention discloses a powerful new system for engineering antibody affinity and specificity, by constructing a microbial analogue of the mammalian system's B cell repertoire. Antibodies are displayed on the surface of yeast cells by genetic fusion with yeast cell wall proteins, especially agglutinin proteins. After mutation, variants are selected on the basis of improved binding characteristics with fluorescently labeled targets. The selection method also identifies proteins with enhanced phenotypic characteristics, proteins that are displayed at higher levels, proteins that are secreted at higher efficiency and proteins of improved stability
                                                                                                                                          Selecting proteins with enhanced phenotypic properties than wild-type proteins, is useful for highly specific cancer diagnosis and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Selecting proteins with enhanced phenotypic properties than wild-type proteins, is useful for highly specific cancer diagnosis and therapy.

The present invention relates to a method for selecting proteins for displayability on a yeast cell surface. The method comprises transforming yeast cells with a vector that expresses a test protein fused to a yeast cell wall protein (AGA2), contacting the cells with a label that binds to proteins displayed on the cell wall, and isolating label-bound cells, where the test protein is from a variegated population generated by mutagenesis. The invention is also directed to new processes for engineering T cell receptor for improved binding properties. Improved T cell receptor molecules are useful in therapies for cancer, sepsis, autoimmune diseases such as arthritis, diabetes or multiple sclerosis. The methods are useful to select proteins with altered affinity, altered specificity or conditional binding. The present sequence is an epitope tag fused between protein of interest and yeast cell wall protein AGA2
                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for identifying compounds which inhibit internalization of cell surface receptors. Provided are an array of locations, each containing cells with a cell surface receptor protein, that are treated with a test compound. The protein is luminescently labeled or contacted with a luminescently labeled cell before or after test compound treatment. Any luminescence produced is converted into digital data and automatically analysed to determine if the test compound induced the protein internalization. The novel method is used to screen for compounds which modulate cell surface receptor protein internalization, this can be used in drug discovery, to test compound efficacy in living biological systems. The assay method is automated and compact. It has high throughput and uses smaller volumes of reagents and test compounds. Sequences AAY77704-718 represent examples of peptide epitope tags used in the course of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Automated screening method for identifying compounds which induce cell surface receptor internalization, useful for drug discovery.

The invention relates to a novel non-native peptide derived from corticotropin-releasing factor-2 (GRF2). The CRF2 peptides have the following activities: myopathic, osteopathic, hypotenaive, cardiant, vasotropic, antidiabetic, analgesic, antiallergic, tranquilizer, anxidiabetic, analgesic, antiallergic, tranquilizer, anxidytic, antidepressant, and antiarthritic. The CRF2 peptides, and crelated compounds derived from other proteins, are used to prevent or treat disorders modulated by the CRF2 receptor, e.g. skeletal muscle atrophy or wasting, and bone disorders, however caused, heart/circulatory diseases (e.g. hypertension, congestive heart failure, heart attack, reperfusion injury, migraine, stroke, memory loss, Alzheimer's disease, dementia); joint disorders (osteoarthritis or rheumatoid arthritis); ont disorders (osteoarthritis or rheumatoid arthritis); ont disorders (osteoarthritis or rheumatoid arthritis); low levels of adrenocorticotrophic hormone; anorexia nervosa; depression; also to reduce body temperature and to control appetite or cognitive function. Nucleic acids, optionally labelled, that encode the CRF2 peptides are used to synthesis and for recombinant production of CRF2 peptides are used to evaluate expression of the CRF2 peptides after gene therapy. This sequence represents a novel native CRF polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               non-native, corticotropin-releasing factor-2, CRF2; myopathic; osteopathic; hypotensive; cardiant; vasotropic; antimigraine; cerebroprotective; nootropic; neuroprotective; anorectic; antidiabetic; analgesic; antiallergic; tranquilizer; anxiolytic; antidepressant;
                                                                                                                                                                                                                                            New non-native peptide derived from corticotropin-releasing factor-2, useful for treatment and prevention of e.g. muscular atrophy, also related nucleic acid and antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1; Indels

The invention relates to a novel non-native peptide derived from corticotropin-releasing factor-2 (CRF2). The non-native CRF2 peptides have the following activities: myopathic, osteopathic, hypotensive, cardiant, vasotropic, antidipateic, carebroprotective, noctropic, cardiant, vasotropic, antidipateic, and antidipateic, and and bone disorders, however.

Caused, heart/circulatory diseases (e.g. hypertension, congestive heart attack, reperfusion injury, migraine, stroke, memory loss, fallure, heart attack, reperfusion injury, migraine, stroke, memory loss, allery, stress; anxiety, low levels of acrencontricotrophic hormone; anorexia nervosa; depression; also to reduce body temperature and to control appetite or cognitive function. Nucleic acids, optionally and probes for amplification, also for gene synthesis and for recombinant control of the non-native CRF2 peptides are used as primers and probes for amplification, also for gene synthesis and for recombinant therapy. Antibodies specific for the non-native CRF2 peptides after gene therapy.

This sequence represents a CRF2 non-native polypeptide of the invention.
                                                                                                                                                                                                                                                          New non-native peptide derived from corticotropin-releasing factor-2, useful for treatment and prevention of e.g. muscular atrophy, also related nucleic acid and antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .;

fragments used in an assay to determine novel transcriptional activators.

fragments used in an assay to determine novel transcriptional activators.

The method involves the production of transcriptional activators

comprising of a DNA-binding group and a 6-25 amino acid peptide that is

covalently bonded to the DNA binding group and does not represent a

fragment of a natural transcription activator. Protein-protein

interactions are identified in the assay by fusing a DNA-binding domain

to a library of DNA fragments and introducing this and a fusion of target

protein and a polypeptide containing a region of Gal4 which interacts

contein and a polypeptide containing GallIP and identifying members of the

protein and a polypeptide containing GallIP and identifying members of the

controlling gene activity, particularly in gene therapy (e.g. recognizing

a site close to a selected therapeutic gene). Transcription can be

activated without blocking other transcriptional activators. They

probably act by interacting with a component of the RNA polymerase II

holoenzyme, GallI, the strongest known yeast activator, which provides a

more sensitive assay allowing detection of even weak protein-protein

coverexpressed

This sequence corresponds to a peptide (CDR-H1-7; AAY14403) derived from the sequence of the heavy chain variable region complementarity determining region (CDR)-1 of the anti-hepatitis C virus (HCV) Ser/Thr protease monoclonal antibody (MAb) 8D4 protein. The peptide has a Tyr to Phe amino acid substitution at position 3 compared to the CDR-H1-7 peptide. The invention relates to the use of partial peptides (AAY14348-Y14353) from the MAb 8D4 for inhibiting HCV serine protease activity

Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                              The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Neutralized antibody partial peptide derived from hepatitis C virus -
useful for inhibiting Hepatitis C Virus (HCV) serine protease activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Complementarity determining region; CDR; monoclonal antibody; MAb; hepatitis C virus; HCV; protease; binding site.

The invention relates to diagnosing the presence of colon cancer, metastases of colon cancer, staging colon cancer, monitoring colon cancer for the onset of metastasis or monitoring a change in stage of colon cancer in a patient. The method involves determining a colon specific gene (CSG) in cells, tissues or bodily fluids and comparing it with levels of CSG in cells, tissues or bodily fluids from a normal human control. Colon cancer can be treated by administering a molecule which down regulates the expression or activity of CSG. An immune response against a target cell expressing CSG can be induced by delivering an immunologically stimulatory amount of a CSG protein to a patient, so that in immune response is mounted. Therapeutic agents are useful for imaging colon cancer in a patient by administering an agent labelled with for paramagnetic ions or a radioisotope to the patient. They are also useful for preventing the onset of colon cancer, and in diagnosis and treatment of the disease. Sequences AAU85424-AAU85502 represent human colon specific protein antibody binding sites used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Scaffold protein; beta strand; beta sheet; stabilize antigen; vaccine; tumour; chemotherapeutic agent.

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta crands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands C functionally equivalent derivative of these sequences. The beta strands C functional beta strands A1-A3 are included in the structure the constructed of two beta sheets, with the structure the scaffold is constructed of two beta sheets, with the structures C scaffold is constructed of two beta sheets, with the structure of the scaffold is constructed of two beta sheets, with the structure of the receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold cor whole protein which hinds to a tumour antigen. This will the target the complex to tumour cells. Therefore the scaffold protein may be bound to a protein which hinds to a tumour antigen. This will the tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                             New scaffold protein, useful for stabilizing antigens used as vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, CTLA-4; scaffold protein; antigen-binding; receptor-binding;

or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold may be bound to a protein which binds to a tumour antigen. This will target the complex to tumour cells. Another surface may be bound to a cytotoxic molecule or an autoimmune antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention is concerned with producing scaffold proteins based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Scaffold composed of single-chain polypeptide having beta sandwich architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen- or receptor binding fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, CTLA-4; scaffold protein; antigen-binding; receptor-binding;

Sequences AANY 0607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 6 beta-strands. The scaffold protein is constructed of beta trands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands for the next by hydrogen bonds, which generate a beta sandwich architecture. C form two beta sheets S1/S4/S3 and S6/S5/S2 with each structures the scaffold is constructed of two beta sheets, with the structures to cother via amino acid loops, where at least one of the loops binds to a creceptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold cumplex to tumour cells. Therefore the scaffold protein may be used to target the complex to tumour cells. Another surface may be bound to a cyctoxic molecule or an autoimmune antibody which may then kill the tumour cells. Therefore the scaffold protein may be used to target chemotherapeutic agents to specific cells. It may also be used to stabilize individual peptides in a peptide library and may be used in diagnostic techniques, and to stabilize antigens used as vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences AAY40727-Y40748 are functionally equivalent derivatives of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New scaffold protein, useful for stabilizing antigens used as vaccines.

New scaffold protein, useful for stabilizing antigens used as vaccines.

Disclosure; Page 6; 105pp; English.

Sequences AAY40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a scaffold protein. S4 is a beta strand peptide which forms part of a beta sheet. Peptides (AAY40601-Y40609) together form a single-chain scaffold protein which contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 5 beta-strands. The scaffold protein is constructed of beta strands S1-S6, and may also include beta strands A1-A3, or any functionally equivalent derivative of these sequences. The beta strands C form two beta sheets S1/S4/S3 and S6/S5/S2 with each strand connected to the next by hydrogen bonds, which generate a beta sandwich architecture. If the additional beta strands A1-A3 are included in the structure the scaffold is constructed of two beta sheets, with the structures A1/S1/S4/S3 and S6/S5/S2/A2/A3. The beta strands are connected to each other via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens

Sperm attracting peptide SepSAP.
Sepia officinalis (Common cuttlefish).
Eukaryota, Metazoa; Mollusca; Cephalopoda; Coleoidea; Neocoleoidea;
Decapodiformes; Sepioidea; Sepia.
"A novel active pentapeptide from chicken brain identified by antibodies to FMRFamide.";

Nature 305:328-330(1983).

-!- FUNCTION: MAY FUNCTION AS A NEUROTRANSMITTER OR MODULATOR.

-!- SIMILARITY: BELONGS TO THE FARP (FMRFAMIDE RELATED PEPTIDE)
FAMILY.

GO, GO:0007218; P:neuropeptide signaling pathway; TAS.

Neuropeptide; Amidation.

allatostatin superfamily in the shore crab Carcinus maenas.";
Eur. J. Biochem. 250:727-734(1997).
-!- FUNCTION: May act as a neurotransmitter or neuromodulator.
-!- SIMILARITY: Belongs to the allatostatin family.
Neuropeptide; Amidation; Multigene family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -!- SUBCELLULAR LOCATION: Secreted.
-!- PTM: Sulfation is important for activity and for the binding to putative membrane receptor (By similarity).
-!- SIMILARITY: Belongs to the phytosulfokine family.
Growth factor; Sulfation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE, AND IDENTIFICATION BY MASS SPECTROMETRY.

"A secreted peptide growth factor, phytosulfokine, acting as a
stimulatory factor of carrot somatic embryo formation.";
Plant Cell Physiol. 41:27-32(2000).
-!- FUNCTION: In presence of 2,4-D, stimulates proliferation of the
cells, but does not stimulate differentiation into the somatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              10-OCT-2003 (Rel. 42, Last annotation update)

Sex pheromone cAM373 (Clumping-inducing agent) (CIA).
Enterococcus faecalis (Streptococcus faecalis).
Bacteria; Firmicutes; Lactobacillales; Enterococcaceae; Enterococcus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            INOUPE A.;
"Isolation and identification of multiple neuropeptides of the misolation and identification of multiple neuropeptides of the malatostatin superfamily in the shore crab Carcinus maenas.";

Bur. J. Biochem. 250:727-734(1997)

-!- FUNCTION: May act as a neurotransmitter or neuromodulator.
-!- SIMILARITY: Belongs to the allatostatin family.

Neuropeptide; Amidation; Multigene family.

MOD_RES
5 AMIDATION (POTENTIAL).

-!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + 8-amino-7-
oxononanoate = S-adenosyl-4-methylthio-2-oxobutanoate + 7,8-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- COFACTOR: Pyridoxal phosphate.
-!- PATHWAY: Biotin biosynthesis.
-!- SUBUNIT: Homodimer.
-!- SIMILARITY: Belongs to class-III of pyridoxal-phosphate-dependent
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-JAN-1990 (Rel. 13, Created)

                                                                                                                                                                                                                                                                                                                           Globulin IV alpha subunit delta-1 chain, seed - cucurbit (fragments)

globulin alpha subunit delta-1 chain

C; Alternate names: 11S globulin alpha subunit delta-1 chain

C; Species: Cucurbita sp. (cucurbit)

C; Date: 21-Nov-1993 #sequence_revision 08-Nov-1996 #text_change 08-Nov-1996

C; Accession: S09066

Chochestokinin-5 - dog
NiAlternate names: CCK-5
C;Species: Canis lupus familiaris (dog)
C;Species: Canis lupus familiaris (dog)
C;Date: 18-Oct-1989 #sequence_revision 18-Oct-1989 #text_change 18-Aug-2000
C;Accession: A32516
R;Shively, J.; Reeve Jr., J.R.; Eysselein, V.E.; Ben-Avram, C.; Vigna, S.R.; Walsh, Am. J. Physiol. 252, G272-G275, 1987
A;Title: CCK-5: sequence analysis of a small cholecystokinin from canine brain and A;Reference number: A32516; MUID:87153871; PMID:3826354
A;Reference number: A32516
A;Residues: 1-5 <SHI>C;Comment: This peptide corresponds to the five carboxyl-terminal residues of chole C;Superfamily: gastrin
C;Superfamily: gastrin
C;Superfamily: gastrin
C;Keywords: amidated carboxyl end; Neuropeptide
F;5/Modified site: amidated carboxyl end (Phe) #status experimental
